

Performing Object Detection on Drone Orthomosaics with Meta's Segment Anything Model (SAM)

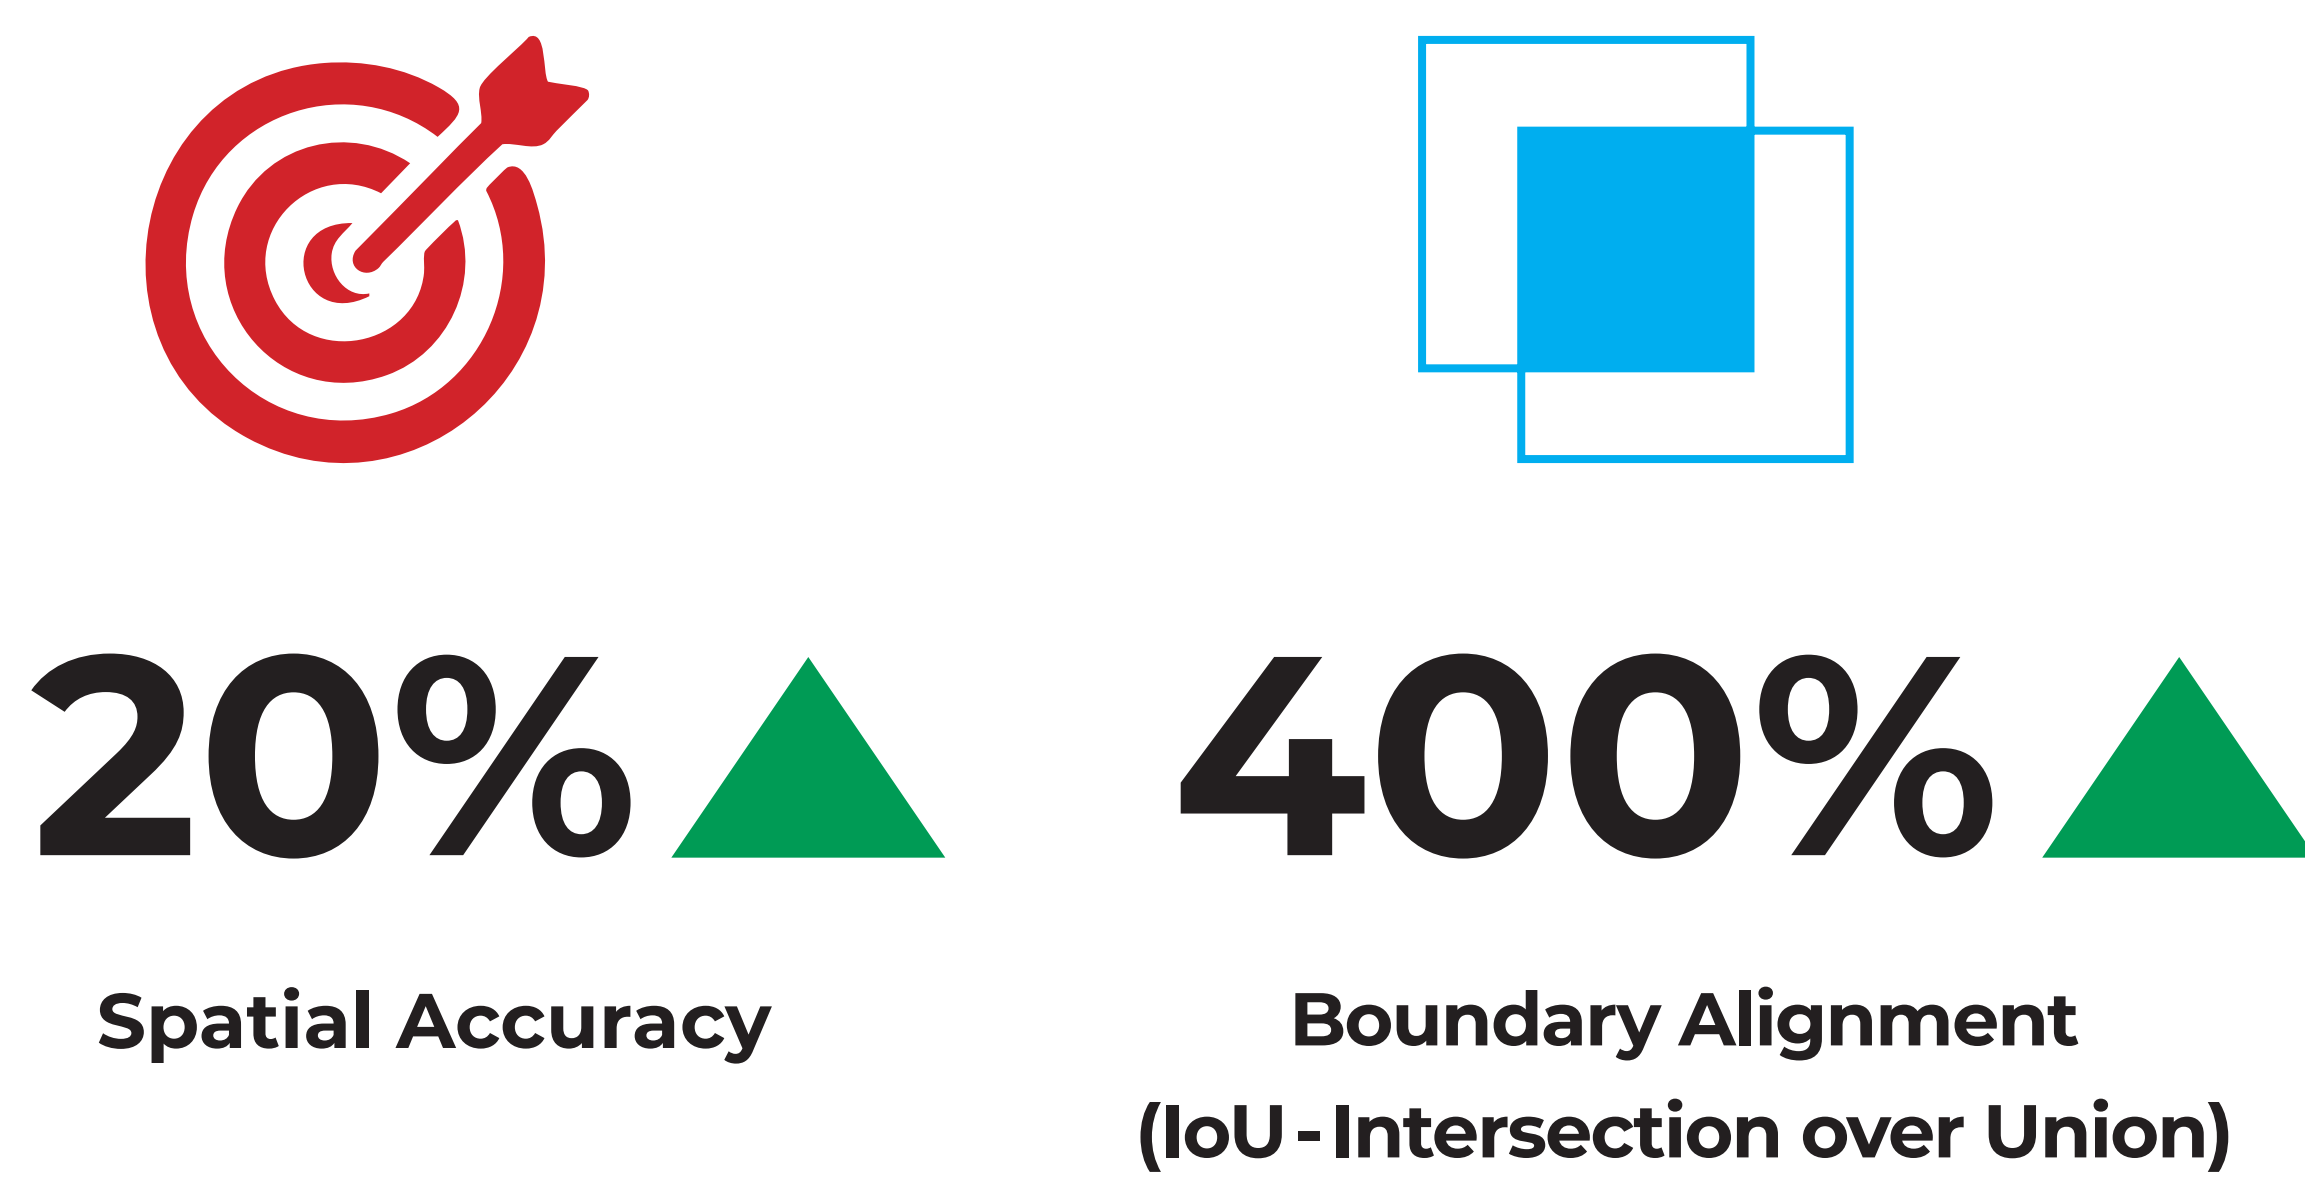

Introduction

Segment Anything (SAM) enables zero-shot object detection in remote sensing imagery, no model training required. SAM was integrated with geospatial Python tools to build a fully open source, end-to-end workflow. Benchmarking shows strong performance in comparison to proprietary software.

Methodology

- ◇ Data Ingestion
- ◇ Preprocessing
- ◇ Mask Generation
- ◇ Post-Processing
- ◇ Accuracy Evaluation
- ◇ Benchmarking

Results

Acknowledgments

This work was funded by FiOR Innovations and Woodburn Nursery & Azaleas. We deeply appreciate their support and partnership.

Zero-Shot Object Detection

Open source. Superior performance.
